HARRY ERICSON A. CABRERA

WordPress & Full-Stack Developer | AI Engineer

Puerto Princesa City, Philippines (GMT+8) | harryericsoncabrera15@gmail.com
Portfolio: cabreraharry.github.io | github.com/cabreraharry | linkedin.com/in/harry-ericson-cabrera-3b2801277

PROFILE

WordPress and full-stack developer with almost two years of hands-on work on a live business website for a U.S. real estate brokerage: updates, troubleshooting, custom PHP code, SEO, accessibility and content publishing. I moved the whole site to a new host, raised its accessibility score to 99 on mobile, and built and published 25 SEO blog posts. Beyond WordPress, I build software in Python, PHP, Rust and React, mobile apps in Flutter, and AI agents and integrations; I use AI tools every day as a core part of how I work. I work remotely and independently, send clear written reports, and am used to working across time zones.

CORE SKILLS

- **WordPress:** maintenance, theme and plugin updates, child themes, Elementor, WPCode snippets, must-use plugins, Rank Math SEO, LiteSpeed Cache, UpdraftPlus backups, troubleshooting, site migration
- **Programming languages:** Python, PHP, Rust, Dart (Flutter), JavaScript, TypeScript, SQL, HTML and CSS
- **AI & prompt engineering:** prompt engineering; AI chatbots and voice agents (GoHighLevel Conversation AI and Voice AI, Retell AI); MCP integrations that connect AI to WordPress, the CRM and Google Sheets; LLM prompt evaluation; agentic coding with Claude Code, ChatGPT and Gemini
- **Web & mobile:** Laravel, React, Next.js, Tailwind CSS, Flutter for Android and iOS (BLoC, REST APIs, Firebase), responsive design, WCAG accessibility, schema / structured data
- **Software & cloud:** PyQt6 desktop apps, Tauri, MySQL, SQLite, AWS with Terraform, PowerShell, Git and GitHub, Playwright
- **Hosting & domains:** Hostinger, cPanel, DNS records, SSL, email authentication (SPF, DKIM, DMARC), Google Workspace
- **SEO & analytics:** Google Search Console, Google Analytics 4, Bing Webmaster Tools, PageSpeed / Lighthouse, local SEO
- **CRM & automation:** GoHighLevel (funnels, workflows, email and SMS), Make.com, n8n

EXPERIENCE

Software & Website Developer | U.S. Prime Realty LLC, Florida, USA (remote) 2025 – 2026

- **WordPress maintenance:** kept usprimerealty.com running and up to date (Real Estate 7 theme with child theme, Elementor, Rank Math, LiteSpeed Cache, WPCode, UpdraftPlus) and fixed display, cache and plugin issues.
- **Site migration:** moved the full WordPress site (database, themes, plugins, media) from cPanel hosting to Hostinger, rebuilt all 54 DNS records and repaired SPF, DKIM and DMARC so company email, property listings and landing-page subdomains kept working.
- **Accessibility:** raised the Google PageSpeed accessibility score to 99 (mobile) / 91 (desktop) and cut WCAG failures on sampled pages from 37 to 11: language attribute, ARIA labels, alt text, colour contrast and keyboard access, done in the child theme and WPCode so theme updates cannot undo them.
- **Content & SEO:** built and published 25 SEO blog posts from marketing briefs: responsive HTML/CSS layouts, WebP images with alt text, Rank Math titles, descriptions and focus keywords, FAQ sections with FAQPage schema, tested at seven screen widths from 360 to 1600 px.
- **Structure & schema:** converted 445 FAQ questions on 30 Elementor pages into proper H3 headings (backed up first) and wrote a small must-use plugin in PHP that adds FAQ schema to blog posts.
- **New website:** designed and built israel.usprimerealty.com, a project showcase site for an overseas property developer: floor-plan cards, live USD pricing from an exchange-rate API, inventory imported from the developer's Excel file, and an enquiry form connected to the CRM.
- **CRM, funnels & AI:** built GoHighLevel landing pages and a seminar sign-up funnel, workflows, email templates and SMS campaigns; set up and tuned the website's AI chatbot and voice agent (prompts, knowledge bases); connected AI assistants to WordPress and the CRM through MCP; set up Search Console, GA4 and a local SEO plan.

Software Developer | ShortCut Linking (SCL), remote 2026

- **Desktop app:** main developer of ShortCut Studio, built with Tauri 2 (Rust) and React, TypeScript and Tailwind CSS, including its installer and update system.
- **Python:** built PyQt6 desktop tools for the team (task runner with live activity monitor and database diff viewer) and Python back-end services, plus an evaluation tool for AI (LLM) prompts.
- **Rust:** ported back-end services from Python to Rust, including PDF processing and search indexing; built a PDF-to-LaTeX converter in Rust with a PyQt6 tool that checks its output against the original.
- **Cloud & web:** set up AWS servers with Terraform, and redesigned the web interface in HTML, CSS and JavaScript (design tokens, toolbar and shared components).

Mobile & Web Developer | Hayahay (hayahay.ph), Philippines 2025 – 2026

Online marketplace where people sell their products and services.

- **Mobile:** worked on the Hayahay user app in Flutter (Dart) for Android and iOS: BLoC state management, REST API calls with Dio, Firebase.
- **Back end:** worked on the Laravel (PHP) API that powers the marketplace.

SELECTED WORK (LIVE)

- **usprimerealty.com** – company WordPress site I maintained, migrated and made accessible
- **Blog posts I built and published:** Naples Cost of Living 2026, Florida Hurricane Season
- **israel.usprimerealty.com** – website I designed and built | **seminar.usprimerealty.com** – sign-up funnel

EDUCATION

Bachelor of Science in Computer Science | Palawan State University 2021 – 2025

- Thesis: “The Hat: Aperiodic Einstein Monotile as Basis for Cryptography”
- Member, Association of Computer Scientists (ACS)

CERTIFICATIONS

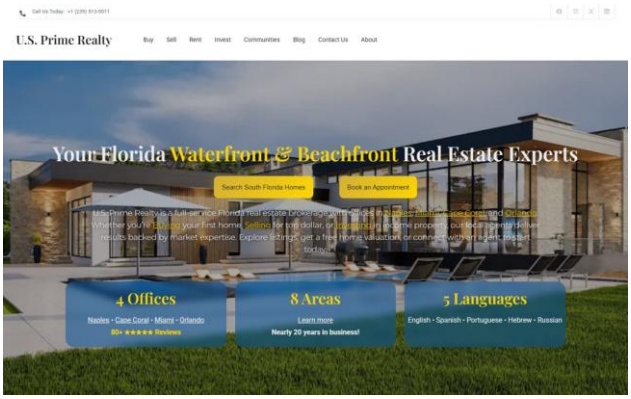

- **Python Essentials 1** – Cisco Networking Academy / OpenEDG Python Institute, May 2025
- **GoHighLevel Course for Freelancers** – Koya RJ, May 2025
- **Make Foundation and Make Basics** – Make.com, Jan 2025
- **Web Development 101: Building Your First Front-End** – Xaltius Academy workshop, Jan 2024
- **Data Analysis with Python** – freeCodeCamp, Dec 2023 (about 300 hours) verify
